Number: #7

Title of work: Crane

Designer: Junming He

Medium: Blender

Date of completion: August 2023

I used Blender to create this model. The project came from a light-bulb moment when I was wandering. I created this scene to present a sense of contrast. A brightly colored balloon hangs from the top of a crane with a dull hue. I hope the viewers think about the relationship between old and the new, like the youth and the elder, the new technology and the old traditions. What I've learned from this project is the use of instance. I think this function could be useful in particle systems.
